

A COL 215

(9th Dec.)

Read Only Memory (ROM)

256
intersections
crosspoints

These intersections
are programmable.

A programmable connection is like
a switch that can be altered to
be in a closed state
(the lines are connected)

Or an open state
(the lines are disconnected)

The internal storage of
a ROM can be specified by
a truth table

Inputs

I_4	I_3	I_2	I_1	I_0
0	0	0	0	0
0	0	0	0	1
0	0	0	1	0
0	0	0	1	1
-	-	-	-	-
1	1	1	1	0
1	1	1	1	1

Outputs

A_7	A_6	A_5	A_4	A_3	A_2	A_1	A_0
1	0	1	0	0	1	1	0
0	1	1	1	1	1	0	0
1	0	0	0	1	1	1	0
1	1	1	0	1	1	1	0

We can also consider each output terminal as a Boolean function expressed as a sum of minterms.

$$A_7(I_4, I_3, I_2, I_1, I_0) = \sum(0, 3, \dots, 30)$$

$$A_2(\dots) = \sum(0, 3, \dots, 31)$$

Exercise Design a combinational circuit
using a ROM — the circuit
accepts a three bit number and outputs
a binary number that is equal
to the square of the input.

$A_2 \ A_1 \ A_0$

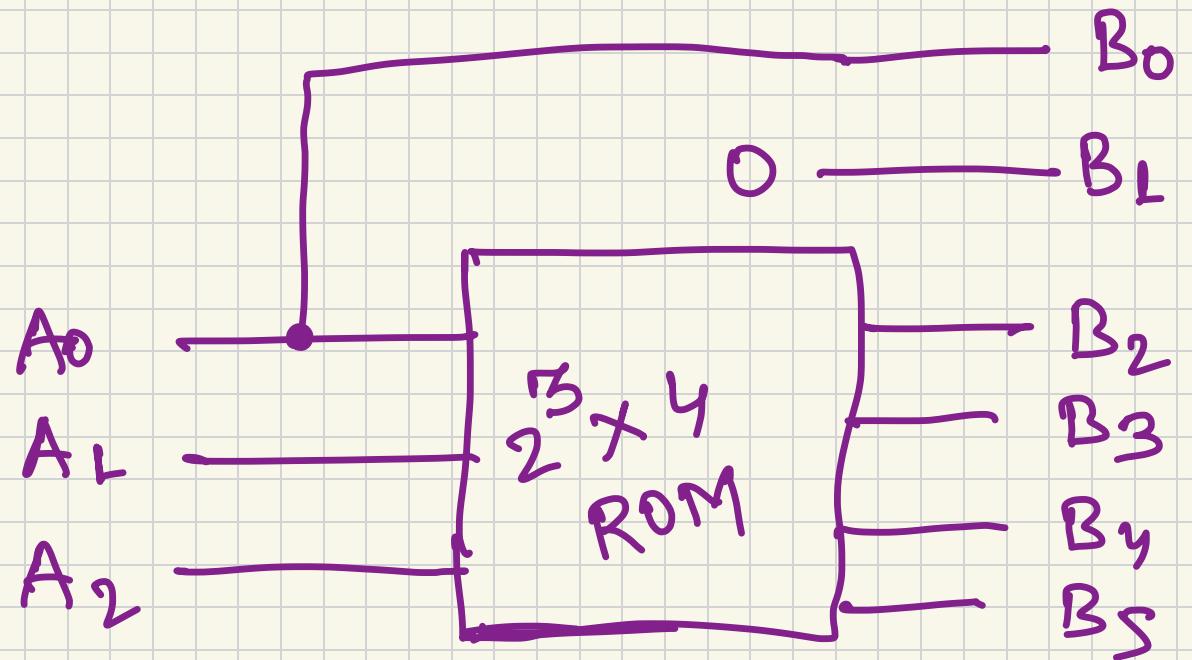

0	0	0
0	0	1
0	1	0
0	1	1
1	0	0
1	0	1
1	1	0
1	1	1

Squares

0
1
4
9
16
25
36
49

$B_5 \ B_4 \ B_3 \ B_2 \ B_1 \ B_0$

0	0	0	0	0	0
0	0	0	0	0	1
0	0	0	1	0	0
0	0	1	0	0	1
0	1	0	0	0	0
0	1	1	1	0	1
1	0	0	1	0	0
1	0	1	0	1	0
1	1	0	0	1	0
1	1	1	1	0	1

ROM truth table

$A_2\ A_1\ A_0$	$D_5\ B_4\ B_3\ B_2$
0 0 0	0 0 0 0
1 1 1	1 1 1 1

Mask programming

→ during the fabrication process

PROM

Programmable ROM

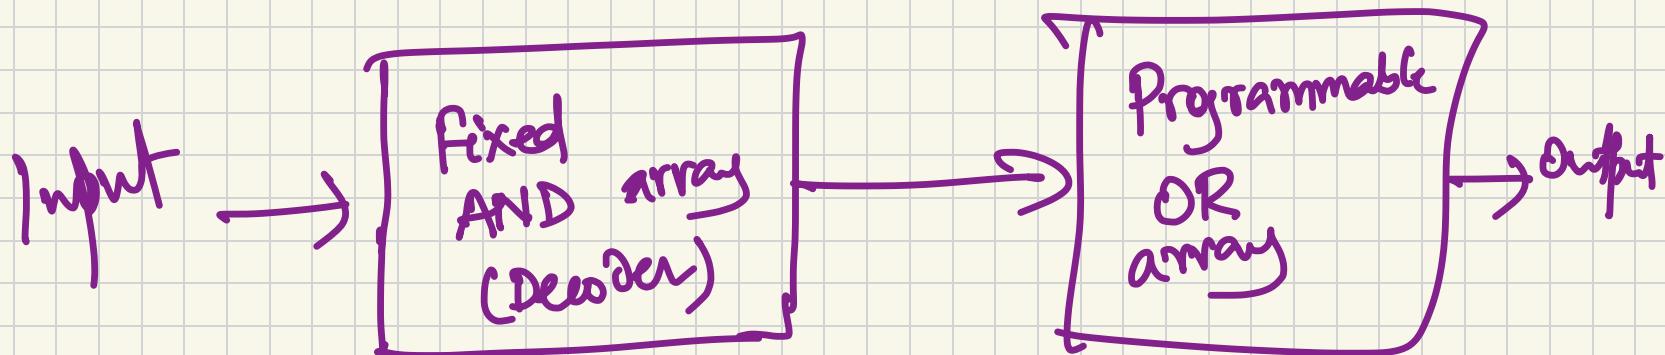

- comes with all fuses intact
- "blow" some of them by applying high voltage
- once programmed, this is permanent

Erasable PROM

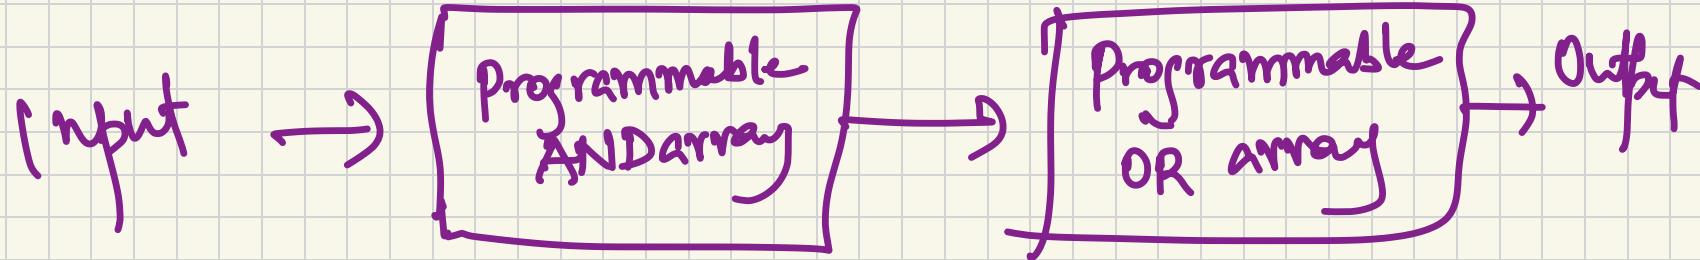

→ Can be restructured to
the original state
by placing it under u/v
light

EEPROM

↳ restructuring can be done
with electrical signals

(PROM) Programmable ROM

$$F_1 = AB' + AC + A'BC'$$

$$F_2 = (AC + BC)'$$
